

TECH FUSION

LABEL FINISHING SYSTEM

The Fusion is a hybrid of digital and analogue label finishing technology, with capabilities that include a 24 inch roll diameter, variable frame lengths from 2" to 10", automatic lamination, die cutting and stripping combined within a package that utilizes minimal floor space. ADSI's automatic Smart Mark registration system coupled with automatic web guidance insures registration accuracy and error-free tracking. The system is available in 10" and 16" widths to accommodate virtually any label print engine. Operation is a snap with our easy-to-use interface. Simply select speed and frame size and the system does the rest! Fusion's modular construction allows for the addition of optional UV coating and varnishing systems.

The Fusion provides end users with their own "in house" solution to minimum quantities, long lead times and custom shapes. The professional converter can provide their current customers with "value added" capabilities while responding to the increasing demand for high quality, short run, custom labels.

Speed- 10 I.P.S. (Inches per second)

Die Type- Kocher + Beck magnetic die cylinder (Reset 10")

Weed diameter- 12"

Frame size- 2" - 10"

Roll diameter- 24"

Take up roll diameter- 24"

Power requirement- 208-240 VAC (1200 watt, 43-63 cycles)

Dimensions- 96"x42"

Laminate diameter- 12"

Weight- 600 lbs.

Air requirement- 60 psi minimum
