## Allen Datagraph introduces hybrid die-cutting system

Posted in [New Products](#) on 11th December 2008

Allen Datagraph Systems Inc (ADSI) has introduced a new die-cutting system, the i large run label converting. The Fusion is a hybrid of digital and analog technology using a registration coordination with a cylindrical die to ensure a precise cut at a continuous media flow of 50 feet per minute. The system utilizes a magnetic die cylinder that allows for a variable frame length of 2 -Tech Fusion, for short and lamination, stripping and slitting stations. system in

Its modular design opens up the Fusion to a number of customizations and modifications, including UV coating and varnishing systems. Its automated SimPlex web guidance system is claimed to make set lead and down times, as a trained operator is able to set up the machine in less than ten premiered at this year's Labelexpo Americas in Chicago.
